

## Your Tree Measurements

Here's a place to record your tree measurements so that you have them when you get the link to the data portal.
Please refer to the Instructions for Measuring Your Trees for how to do these measurements.
We are asking for some measurements to the nearest foot. Your tape measure has markings in inches; remember 12 inches=1 foot!

| Type of Tree <br> Thornless mesquite, Native mesquite, Palo verde, Thornless palo verde, Desert willow, Willow acacia, or fruit tree type | Tree Location in Your Yard This will help you know which tree is which! | Tree Height <br> If your tree is still small, use the tape measure to measure the height in feet. | Tree Height <br> Use this if your tree is too big to measure with a tape measure. Do all of these measurements at the same time. We do the calculations at our end so you don't have to. |  |  | Tree Canopy Size or Extent <br> You need to take measurements from west to east and then from north to south in feet. |  | Tree Trunk Size or <br> Circumference <br> If your tree has multiple trunks, measure these separately, add them together, and record the total here in inches. |
